

To Whom It May Concern:

I am pleased to recommend ABC for an MS in Computer Science at your esteemed university. ABC has been my student for continuous four semesters and I have taught him Data Structures, Computer Networks, and Computer Graphics. He is a fine student, in terms of aptitude, hard work, and motivation.

An intelligent, sincere and conscientious student, ABC has maintained a good academic record in my courses. His performance can be described through his clear concepts and strong fundamentals, which have always enabled him to grasp new ideas and topics with relative ease.

Data Structures and Sorting and Searching are important tools that form the foundation of programming languages and he handled these concepts quite well. ABC comes up with innovative ways of applying his concepts as he did while doing a project in the third year based on Distributed Computing.

ABC has also been an extremely active component of the technology scene in college. He was part of the team that created software for 'Solving the Linear Equation' using C++. He has participated in Coding competitions such as competitive coding at various colleges in the annual Technical Festival of IIT where he was placed second. Although he fell seriously ill in the second year of his undergraduate studies, he worked hard and cleared all oral and written examinations.

Always an independent thinker and is seeking to learn new ideas and concepts, he has shown great dedication by venturing beyond the scope of the subject ideas. He keeps himself updated of the latest developments and goes through various technical literature which was evident from the technical discussions and interviews that I have had with him. A student who believes in performing to the best of his ability, ABC will work very hard towards the fulfillment, of any responsibility that he undertakes. I strongly recommend him for admission to your college for graduate studies.
